## RF sub-6GHz and mmWave

## SIM&T SDR SIMULATION & TEST System

### DESCRIPTION

**SIM&T SDR** is designed for 70MHz to 6 GHz and 28GHz mmWave, covering the wide ranges of major commercial frequency ranges. The test platform is a scalable physical-layer test solution supporting 8 x 100 MHz component carrier aggregation, tailored to verify the performance of Wideband communication standard .

**SIM&T Simulation & Test Platform** is a compact test system to generate and analyze a variety of standards compliant and custom waveforms, including ,4G LTE & 5G NR\* ,Wireless LAN, custom OFDM system, and custom IQ baseband model.

The simulation & test solution combines MATLAB and SIM&T Test Platform to provide a flexible function for R&D signal generation and signal analysis of the wireless communication, including 5G NR sub-6GHz. With SIM&T Phased Array Active Antenna, the test system can support 5G NR 28GHz mmWave.

**SIM&T Scalable RF Module Phased Array Active Antenna** is a standard commercial mmWave phased array antenna product. User can conduct with any signal generator to transmit in mmWave band, or further, integrate any baseband chip to develop into 5G mmWave commercial products like 5G NR mmWave CPE or 5G NR mmWave Radio Unit (RU).

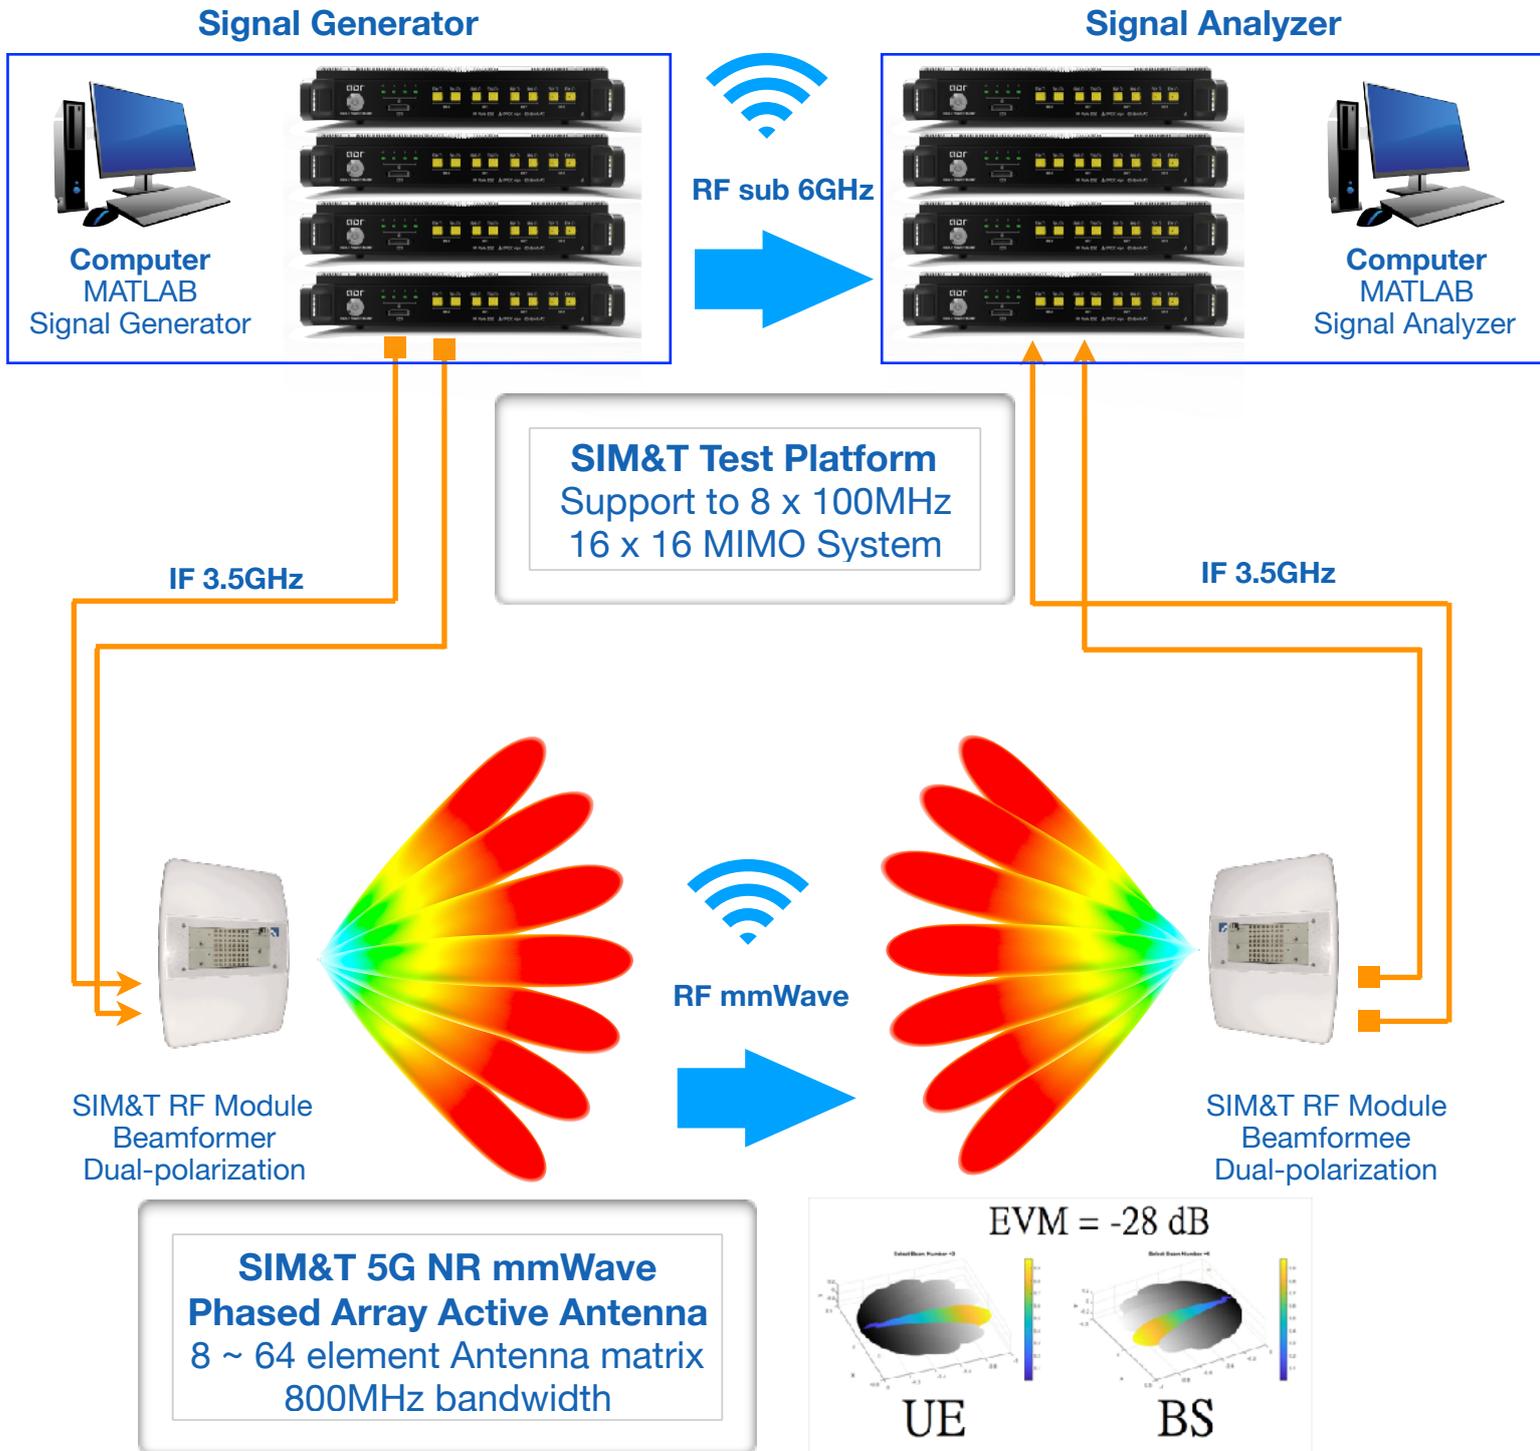

*\*4G LTE & 5G NR (OpenAirInterface™ Software Alliance code support)*

### DESIGN FLOW

# SIM&T SIMULATION & TEST SOLUTION

## Block Diagram

SIM&T SDR is a user friendly simulation & test system, targeted for characterizing RF modules and end-products. Combining SIM&T RF Module Phased Array Active Antenna to perform 5G NR mmWave communication can be a cost effective, simple, and fast setup solution.

## Matlab IQ code to REAL RF

**TX()**

- TX(xk,rep,time)

**RX()**

- rk=RX(N\_RF\_Chain, N\_sample)
- rk=RX\_DE(N\_RF\_Chain) → Listen mode, catch xk by trigger

**TX\_RX()**

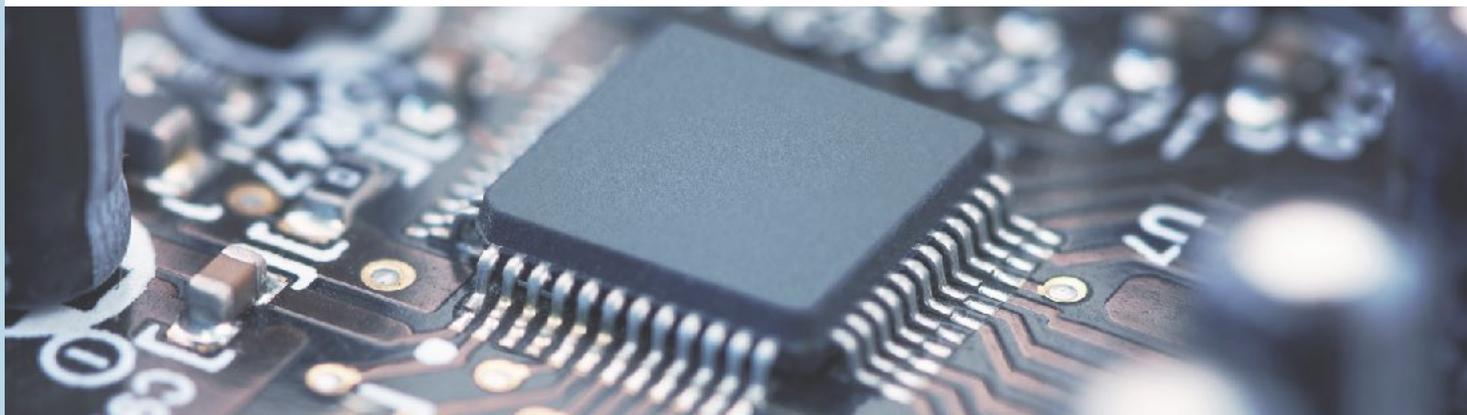

- rk=TX\_RX(xk, TX\_REP, RX\_LEN, RX\_delay, LB\_mode)

**RF Setting**

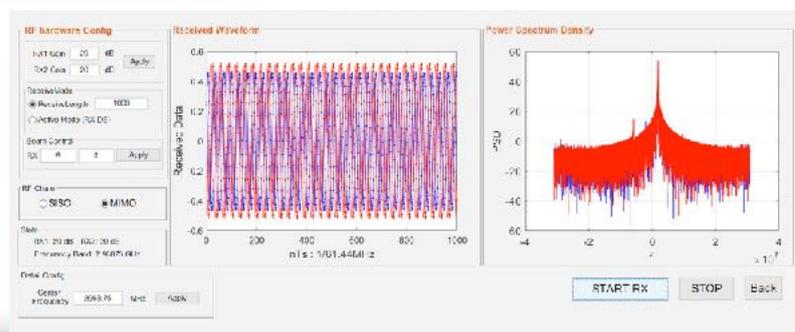

- Set Tx\_gain, Rx\_gain, change center frequency, .....

## SIM&T Simulation & Test SDR Platform

### FUNCTIONALITY

- ▶ Comprehensive physical layer test coverage of 4G LTE, 5G NR , WLAN standards and custom OFDM waveforms
- ▶ High performance configurations for R&D and Design Validation, and cost effective solutions for Manufacturing
- ▶ Supports Time Division Duplex (TDD) and Frequency Division Duplex (FDD) operation
- ▶ RF Bandwidth supports 8 x 100 MHz component carrier aggregation
- ▶ Support to 16 x 16 MIMO
- ▶ On-board clocking or external clock with multi- transceivers synchronization capability
- ▶ Flexible SDR platform “MATLAB & C++” - the system can be implemented to AWG, Spectrum Analyzer, Signal Generator , Signal Analyzer , Network Analyzer and realtime two-way radio transmission.

Interfaces	USB (JTAG), 1 Gb RJ45 , Ref CLK IN/OUT , SF SYNC IN/OUT , RF Digital Control Interface			
Power requirements	12V DC Jack, AC Power Adaptor 100 ~ 240V / 50 ~ 60Hz			
Operation temperature	0°C to +50°C			
Dimensions	333 x 209 x 35 mm			
Weight	2.1 Kgw			

## SIM&T Scalable RF Module Phased Array Active Antenna

### FUNCTIONALITY

- ▶ Point to Point or Point to Multipoint communication **Multi-user MIMO (MU-MIMO)**
- ▶ Up/Down-converter integrated
- ▶ 2D Beam Forming with FoV of 120°
- ▶ Dual-polarization for two layer transmission
- ▶ Scalable antenna modular based on applications
- ▶ Programmable beam pattern & adjustable beam width
- ▶ Perform the beamforming and beam tracking
- ▶ Standard commercial mmWave phased array antenna product
